### Self-copying Robot (2005)

- Hod Lipson, Cornell
- Programmable blocks
- 2 swiveling pyramidal halves
- Magnetic connections
- 10 cm across
- One stack can assemble another

2/1/17

4

---

---

---

---

---

---

---

---

---

---

### Amoeba Stage

- Single cell
- Lives in soil
- Free moving
- Engulfs food (bacteria)
- Divides asexually

2/1/17

6

---

---

---

---

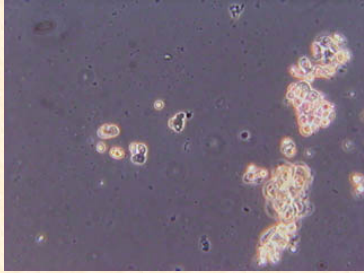

---

---

---

---

**Amoebas**

2/1/17 7

---

---

---

---

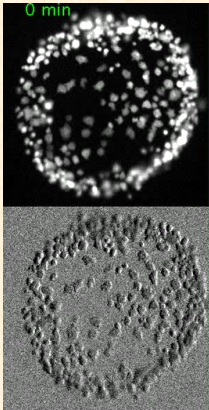

---

---

---

---

**Aggregation Stage**

- Triggered by exhaustion of food
- Aggregate by *chemotaxis*
- Example: 180 cells
- Time lapse: about 14 hours

Science 21 May 2010: Vol. 328, 1021–1025  
2/1/17 8

---

---

---

---

---

---

---

---

**Aggregation Stage**

- Triggered by exhaustion of food
- Aggregate by *chemotaxis*
- Form expanding concentric rings and spirals
- Up to 125 000 individuals

2/1/17 9

---

---

---

---

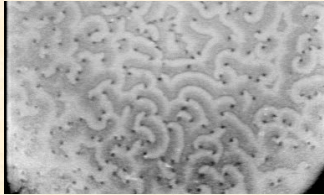

---

---

---

---

### Spiral Waves

- Spiral accelerate cell aggregation (18 vs. 3  $\mu\text{m}/\text{min}.$ )
- Waves propagate 120 – 60  $\mu\text{m}/\text{min}.$
- 1 frame = 36 sec.

2/1/17 (video < Zool. Inst., Univ. München) 10

---

---

---

---

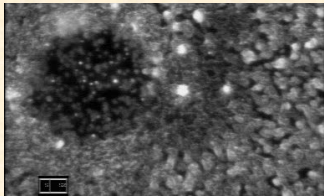

---

---

---

---

### Center of Spiral

- Mechanisms of spiral formation are still unclear
- Involves symmetry breaking
- 1 frame = 10 sec.

2/1/17 (video < Zool. Inst., Univ. München) 11

---

---

---

---

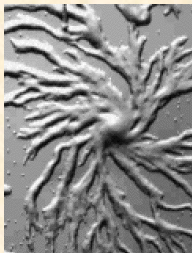

---

---

---

---

### Stream Formation Stage

- Streams result from dependence of wave propagation velocity on cell density
- Breaks symmetry
- As density increases, begin to adhere
- Begin to form *mound*

2/1/17 12

---

---

---

---

---

---

---

---

### Mound Stage

- Cells differentiate
- Some form an elongated finger

2/1/17 13

---

---

---

---

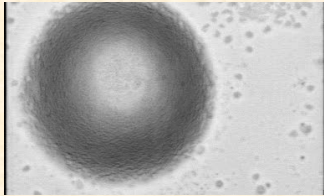

---

---

---

---

### Concentric Waves in Mounds

- Concentric or spiral waves
- Mound comprises  $10^3$  to  $10^5$  cells
- Cells begin to differentiate
- 1 frame = 20 sec.

2/1/17 14  
(video < Zool. Inst., Univ. München)

---

---

---

---

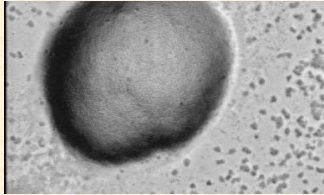

---

---

---

---

### Multiple Centers

- Multiple pacemakers
- Wave fronts mutually extinguish (typical of excitable media)
- One center eventually dominates

2/1/17 15  
(video < Zool. Inst., Univ. München)

---

---

---

---

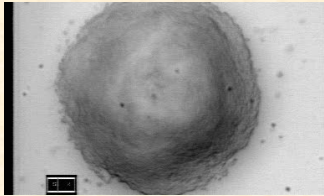

---

---

---

---

### Multi-armed Spirals

- This mound has 5 spiral arms
- Up to 10 have been observed

2/1/17 (video < Zool. Inst., Univ. München) 16

---

---

---

---

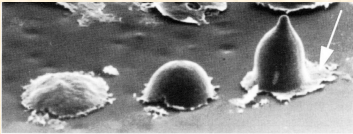

---

---

---

---

### Formation of Acellular Sheath

- Composed of cellulose & a large glycoprotein
- Covers mound and is left behind slug as trail
- Function not entirely understood:
  - protection from nematodes (worms)
  - control of diffusion of signaling molecules

2/1/17 17

---

---

---

---

---

---

---

---

### Slug Stage

- Prestalk elongates, topples, to form slug
- Behaves as single organism with  $10^5$  cells
- Migrates; seeks light; seeks or avoids heat
- No brain or nervous system

2/1/17 18

---

---

---

---

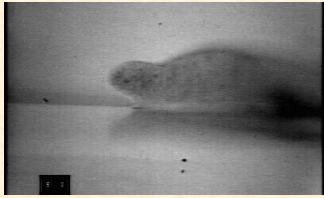

---

---

---

---

### Movement of Young Slug

- Time-lapse (1 frame = 10 sec.)
- Note periodic up-and-down movement of tip

2/1/17 (video < Zool. Inst., Univ. München) 19

---

---

---

---

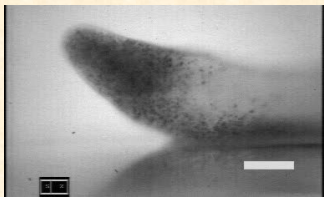

---

---

---

---

### Movement of Older Slug

- Note rotating prestalk cells in tip
- Pile of anterior-like cells on prestalk/prespore boundary
- Scale bar = 50  $\mu\text{m}$ , 1 frame = 5 sec.

2/1/17 (video < Zool. Inst., Univ. München) 20

---

---

---

---

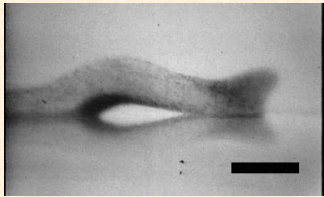

---

---

---

---

### Migration of Older Slug

- Scale bar = 100  $\mu\text{m}$ , 1 frame = 20 sec.

2/1/17 (video < Zool. Inst., Univ. München) 21

---

---

---

---

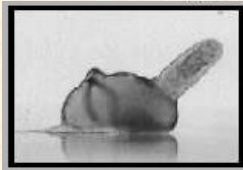

---

---

---

---

### Culmination Stage

- Cells differentiate into base, stalk, and spores
- Prestalk cells form rigid bundles of cellulose & die
- Prespore cells (at end) cover selves with cellulose & become dormant

2/1/1722

---

---

---

---

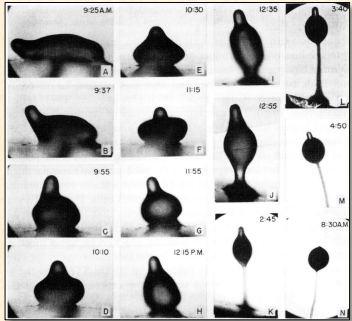

---

---

---

---

### Stages of Culmination

2/1/1723

---

---

---

---

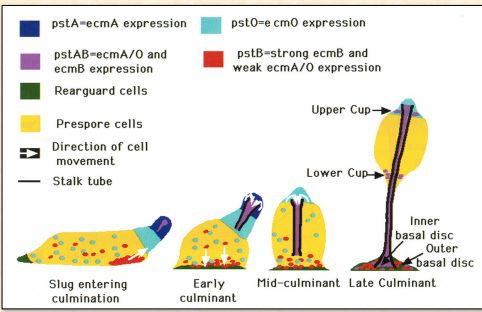

---

---

---

---

### Cell Differentiation at Culmination

2/1/17(figure from Kessin, Dictyostelium)24

---

---

---

---

---

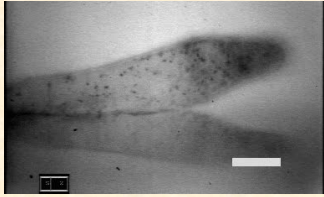

---

---

---

### Early Culmination

- During early culmination all cell in prestalk rotate
- Scale bar = 50  $\mu\text{m}$ , 1 frame = 25 sec.

2/1/17 (video < Zool. Inst., Univ. München) 25

---

---

---

---

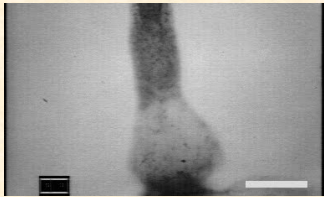

---

---

---

---

### Late Culmination

- Vigorous rotation at prestalk/prespore boundary
- Scale bar = 100  $\mu\text{m}$ , 1 frame = 10 sec.

2/1/17 (video < Zool. Inst., Univ. München) 26

---

---

---

---

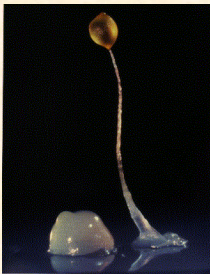

---

---

---

---

### Fruiting Body Stage

- Spores are dispersed
- Wind or animals carry spores to new territory
- If sufficient moisture, spores germinate, release amoebas
- Cycle begins again

2/1/17 27

---

---

---

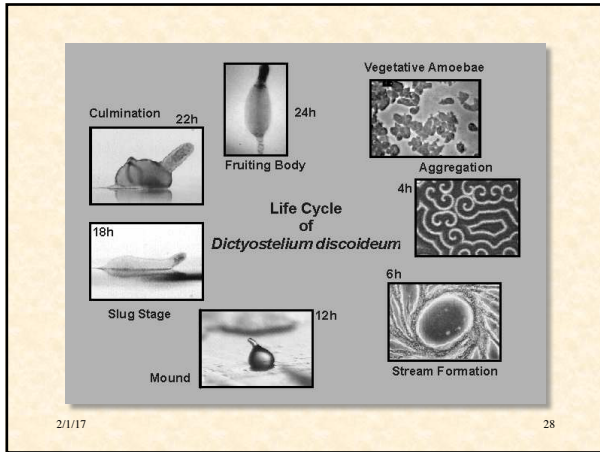

---

---

---

---

---

---

---

---

---

---

---

---

---

### Cooperation and Altruism in Dicty

- Cooperation is essential to Dicty signaling and aggregation
- “Altruism” is essential in stalk formation
- How is cooperation encouraged and cheating discouraged?
- In one case the same gene prevents cheating and allows cohesion
- Green-beard genes?

---

---

---

---

---

---

---

---

### Microbial Cooperation and Altruism

This slide features several images illustrating microbial cooperation and altruism:
 

- A large image on the left shows a variety of slime mold structures, including stalked fruiting bodies and a slug-like form.
- A top-right inset shows a complex, branching, fractal-like structure.
- A middle-right inset shows a microscopic view of cells with purple and green staining.
- A bottom-right inset shows a single, elongated, rod-shaped cell.

---

### Emergent Patterns During Aggregation

- a-c. As aggregate, wave lengths shorten
- d. Population divides into disjoint domains
- e-f. Domains contract into "fingers" (streaming stage)

## Universal Properties

- What leads to these expanding rings and spirals in very different systems?
- Under what conditions do these structures form?
- What causes the rotation?
- These are all examples of *excitable media*

## Slime Mold Solving Maze

- Different slime mold: *Physarum polycephalum*
- Lengths:  $\alpha_1$  (41mm),  $\alpha_2$  (33),  $\beta_1$  (44),  $\beta_2$  (45)
- AG = food sources
- (a) initial, (b) exploring possible connections (4 hrs), (c) shortest (4 more)

	None	$\beta_1$	$\beta_2$	$\beta_1, \beta_2$
None	2	0	0	0
$\alpha_1$	0	0	0	0
$\alpha_2$	0	5	6	3
$\alpha_1, \alpha_2$	0	0	0	0
