This syllabus is a living document, and subject to change as needed. Any changes made after the first day of class will be announced publicly at the start of the class following the change.

Course Description: This is an introductory cryptography course, with focus on understanding modern cryptographic primitives and how to apply them. These concepts include symmetric ciphers, asymmetric ciphers, secure hash algorithms, public key infrastructure, design of cryptographic protocols, zero knowledge proofs and proof of work.

Prerequisite(s): COSC 311, MATH 251.
Credit Hours: 3

Text(s): *Introduction to Modern Cryptography*, 2nd Edition

Course Objectives:
At the completion of this course, students will be able to:

1. Have an understanding of cryptographic terminology.
2. Have an understanding of basic cryptographic primitives.
3. Apply cryptographic primitives to build complex cryptosystems.
4. Analyze the security properties of cryptosystems.

Course Policies:

- **Exams**
  - Exams are closed book, closed notes, and closed devices.
  - No makeup exams will be given.

- **Assignments**
  - Students are allowed to work on exercises and programming assignments in groups of up to TWO students. Only one submission must be handed in for a group. Please ensure that if you work in a group both student’s names are on the work.
  - Exercises are expected to be turned in in print at the start of class the day they are due.
  - Programming assignments are turned in electronically at 23:59:59 the night they are due.
  - No late assignments will be accepted under any circumstances.
  - A wealth of solutions to programming problems can be found on the Internet. While I do not mind you referencing these solutions as examples, it is not acceptable for you to copy code from the Internet and pass it off as yours. The first time you are caught doing this you will receive a zero on that assignment, if it happens again you will receive an F in the class.

- **Attendance and Absences**
  Attendance is encouraged, but you are an adult, and allowed to make decisions about how you spend your time. That being said, no matter what, students are responsible for all missed work, regardless of the reason for absence. It is also the absentee’s responsibility to get all missing notes or materials.
Academic Honesty Policy Summary:

Introduction
Academic integrity is defined as not cheating and not plagiarizing; honesty and trust among students and between students and faculty are essential for a strong, functioning academic community. Consequently, students are expected to do their own work on all academic assignments, tests, projects and research/term papers. Academic dishonesty, whether cheating, plagiarism or some other form of dishonest conduct related to academic course work will automatically result in failure for the work involved. But academic dishonesty could also result in failure for the course and, in extremis, suspension from the University.

Here are the common ways to violate the academic integrity code:

Cheating - Intentionally using or attempting to use unauthorized materials, information, or study aids in any academic exercise. The term academic exercise includes all forms of work submitted for credit.

Fabrication - Intentional and unauthorized falsification or invention of any information or citation in an academic exercise.

Facilitating Academic Dishonesty - Intentionally or knowingly helping or attempting to help another to violate a provision of the institutional code of academic integrity.

Plagiarism - The deliberate adoption or reproduction of ideas or words or statements of another person as one's own without acknowledgment. You commit plagiarism whenever you use a source in any way without indicating that you have used it.

Cheating In cases of cheating, the instructor will impose a minimum sanction of failure for the work involved. The instructor will inform the student and the program director in writing of:

- The nature of the offense
- The penalty imposed within the course
- The recommendation of the instructor as to whether further disciplinary action by the director is warranted

When academic dishonesty occurs, the following procedures will be followed. The instructor will impose a minimum sanction of failure for the work involved. The instructor will notify the student and the appropriate academic dean/director in writing of the nature of the offense and that the minimum sanction has been imposed. The instructor may recommend to the dean that further penalties should be imposed. If further penalties are imposed, the dean/director will notify the student immediately and the student will have five working days to respond to the intention to impose additional penalties. The student has the right to respond to the charge of academic dishonesty and may request in writing that the dean review the charge of academic dishonesty as fully as possible. If the dean/director determines that no further sanctions will be applied, the instructor’s sanction will stand.

Disability Resources Statement:
I want to ensure that the classroom environment is conducive to your learning and ask that you discuss with me any concerns that are interfering with your learning as they arise. Classroom accommodations will be provided for students with documented disabilities. Students must contact the Office of Disability Services about accommodations for this course as early in the semester as possible. Appointments can be made by calling 865-974-6087, or email ods@utk.edu. Further information is available at: http://ods.utk.edu/.
