

COSC 340 - Group Demo #1

Overview

- Each student must be present to receive the grade.
- Demo must be run on one of the group members' laptop.
- Have demo **ready**. No excuses accepted (e.g. "code won't compile", "it was working earlier", "laptop died", etc.).
- Your responsibility to get the demo in front of me during the class session (no hiding).

Process

- Sit with your group.
- I will visit one group at a time.
- You have approximately 5 minutes to demo.
- I'll arrive early and will start with any team that is ready.
- When not demoing to me, quietly meet with your group about the next iteration.

Content

- Pretend I know nothing about your project.
- Walk me through (1) the big problem your app tries to solve and (2) how it tries to solve it from a high-level.
- Demonstrate the main features of your app.
- Stick to the demo, no time for me to answer questions or have discussions.

Grading

- The grading rubric will consist of:
 - App features
 - User interface
 - Demo organization and clarity
- Each student in a group's demo grade will be the same *unless* there are major discrepancies in their individual contribution and the other members' contribution or the student is absent for the demo.
