

## Discussion Lead Instructions

---

The discussion lead must lead the discussion on a paper/tool with the entire class. The purpose is to get a better understanding of the paper/tool and understand different perspectives on it.

The discussion lead should prepare a list of potential topics, questions, and remarks to fuel the discussion. These could include:

- What are the weaknesses of this paper/tool?
- How could this be improved?
- How does this tool compare to others?
- What are the threats to validity?
- Is their evaluation method flawed?
- Would this tool work in a realistic setting?
- What are the implications of the results?

Feel free to call on students to get a discussion started. This counts for everyone's participation grade.
