For Immediate Release

Catalyst to Keynote Renowned Text Mining and Applied Mathematics Conference

Denver, Colorado, April 9, 2010—Catalyst Repository Systems announced today that Catalyst's founder and CEO John Tredennick, along with Catalyst's VP of Operations Bruce Kiefer, will be giving the Keynote presentation at Text Mining 2010, the eighth in a series of workshops held in conjunction with The Society for Industrial and Applied Mathematics (SIAM) International Data Mining Conference.

SIAM is an international community of over 13,000 individual members that fosters the development of applied mathematical and computational methodologies in various application areas. The conference provides a venue for researchers as well as other attendees who are new to the field of text mining, to learn about cutting-edge research, hear outstanding invited speakers and attend tutorials.

"Catalyst is a leader in information management," said Michael W. Berry, co-chair of the workshop and a professor of computer science at the University of Tennessee. "I am very impressed by what they do. In their use of computer-science techniques to mine legal data, they are right on target."

In their session titled, Using Advanced Mathematical Techniques to Help Bring Electronic Discovery Under Control, Tredennick and Kiefer will explore real-world techniques for complex legal matters. Tredennick, a longtime trial lawyer handling these kinds of big cases, will talk about the problem space and how traditional methods for dealing with eDiscovery have failed. Kiefer will address how we use advanced clustering and search based analytics techniques derived from non-negative matrix factorization techniques help address the problem.

“With digital content exploding, our clients are seeking new and better ways to approach eDiscovery and reduce costs,” said Tredennick. “In the past, legal teams would divide up the case documents and put eyeballs on every page. With million-document cases becoming the norm, clients are balking at the costs. Rather than pay expensive hourly rates to look at documents, they are turning to advanced mathematics and statistical techniques to reduce review populations.”

About Catalyst

Catalyst Repository Systems is a leading legal-technology company providing secure, scalable multi-lingual document repositories for electronic discovery,
litigation support, and other complex regulatory matters. For over a decade, corporations and their counsel have relied on Catalyst to control litigation costs and make review teams more effective. Our systems and supporting services cover the heart of the litigation lifecycle—from processing and analytics, to search, review, production and trial.

Catalyst delivers its software directly and through a global partner network that offers consulting, collection, project management and forensic services. The company manages hundreds of servers in two data centers and has hosted for many of the largest organizations in the world, including five of the world's 10 largest companies, four of the nation’s 10 largest insurers and 80 of the nation's 100 largest law firms.
