

## Part C

### Nest Building

11/19/09

1

### Nest Building by Termites (Natural and Artificial)

11/19/09

2

### Resnick's Termites ("Turmites")

11/19/09

3

### Basic procedure

- Wander randomly
- If you are not carrying anything and you bump into a wood chip, pick it up.
- If you are carrying a wood chip and you bump into another wood chip, put down the woodchip you are carrying

— Resnick, *Turtles, Termites, and Traffic Jams*

4

### Microbehavior of Turmites

1. *Search for wood chip:*
  - a) If at chip, pick it up
  - b) otherwise wiggle, and go back to (a)
2. *Find a wood pile:*
  - a) If at chip, it's found
  - b) otherwise wiggle, and go back to (a)
3. *Find an empty spot and put chip down:*
  - a) If at empty spot, put chip down & jump away
  - b) otherwise, turn, take a step, and go to (a)

11/19/09

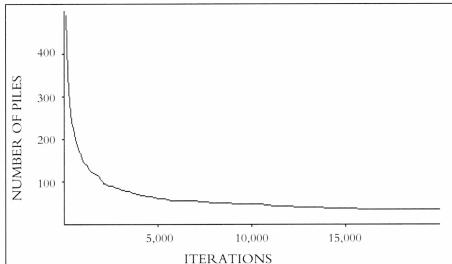

5

### Demonstration

[Run Termites.nlogo](#)

6

### Decrease in Number of Piles

11/19/09

7

### Why does the number of piles decrease?

- A pile can grow or shrink
- But once the last chip is taken from a pile, it can never restart
- Is there any way the number of piles can increase?
- Yes, and existing pile can be broken into two

11/19/09

8

### More Termites

Termites	2000 steps		10 000 steps		
	num. piles	avg. size	num. piles	avg. size	chips in piles
1000	102	15	47	30	
4000	10		3	80	240

11/19/09

9

### Termite-Mediated Condensation

- Number of chips is conserved
- Chips do not move on own; movement is mediated by termites
- Chips preferentially condense into piles
- Increasing termites, increases number of chips in fluid (randomly moving) state
- Like temperature

11/19/09

10

### An Experiment to Make the Number Decrease More Quickly

- Problem: piles may grow or shrink
- Idea: protect “investment” in large piles
- Termites will not take chips from piles greater than a certain size
- Result: number decreases more quickly
- Most chips are in piles
- But *never* got less than 82 piles

11/19/09

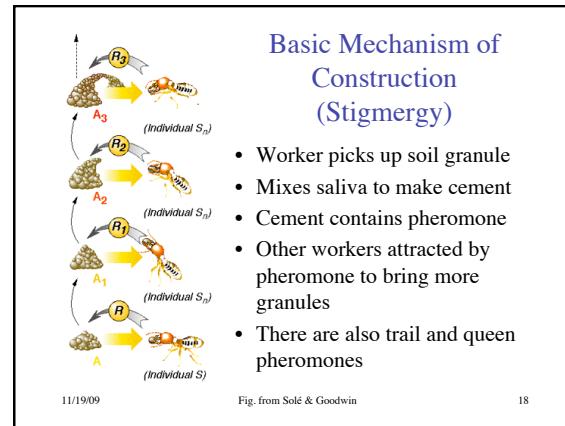

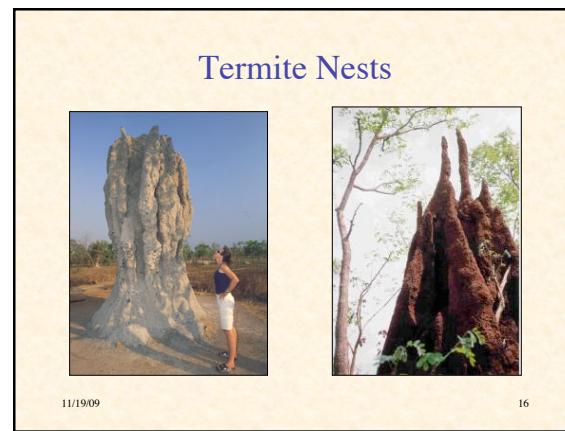

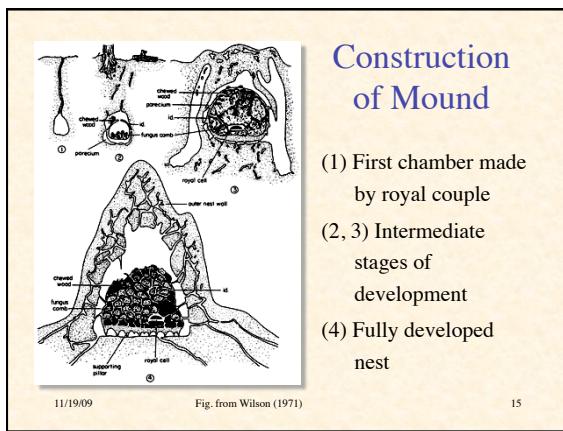

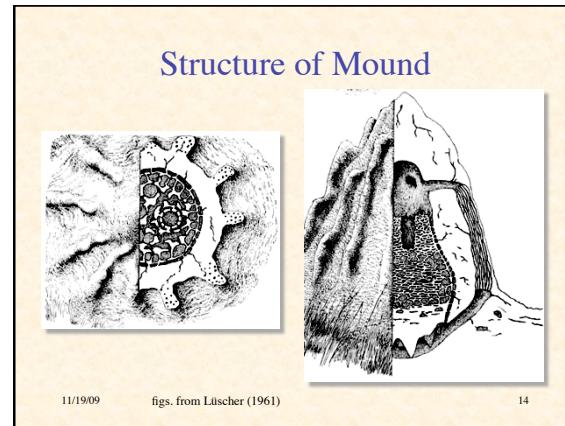

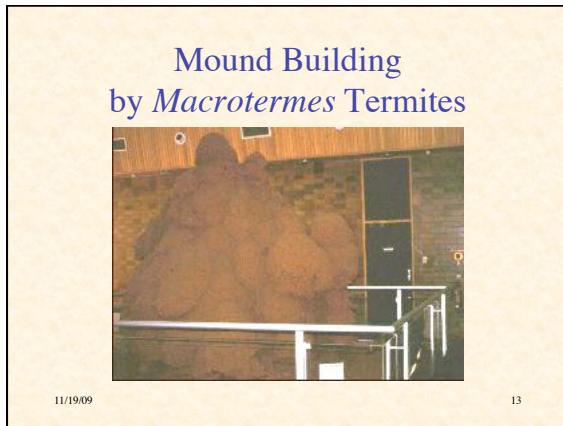

11

### Conclusion

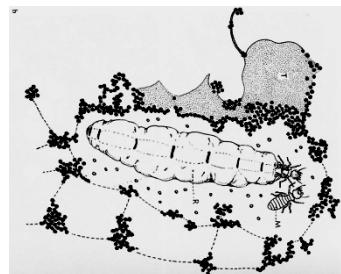

- In the long run, the “dumber” strategy is better
- Although it’s slower, it achieves a better result
- By not protecting large piles, there is a small probability of any pile evaporating
- So the smaller “large piles” can evaporate and contribute to the larger “large piles”
- Even though this strategy makes occasional backward steps, it outperforms the attempt to protect accomplishments

11/19/09

12

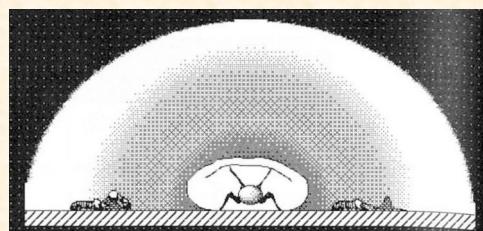

### Construction of Royal Chamber

11/19/09

19

### Construction of Arch (1)

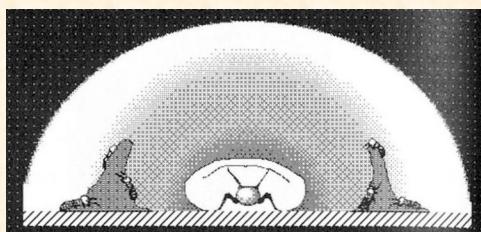

11/19/09

Fig. from Bonabeau, Dorigo &amp; Theraulaz

20

### Construction of Arch (2)

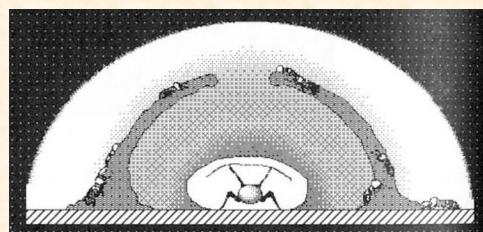

11/19/09

Fig. from Bonabeau, Dorigo &amp; Theraulaz

21

### Construction of Arch (3)

11/19/09

Fig. from Bonabeau, Dorigo &amp; Theraulaz

22

### Basic Principles

- Continuous (quantitative) stigmergy
- Positive feedback:
  - via pheromone deposition
- Negative feedback:
  - depletion of soil granules & competition between pillars
  - pheromone decay

11/19/09

23

### Deneubourg Model

- $H(r, t)$  = concentration of cement pheromone in air at location  $r$  & time  $t$
- $P(r, t)$  = amount of deposited cement with still active pheromone at  $r, t$
- $C(r, t)$  = density of laden termites at  $r, t$
- $\Phi$  = constant flow of laden termites into system

11/19/09

24

### Equation for $P$

(Deposited Cement with Pheromone)

$\partial_t P$  (rate of change of active cement) =  
 $k_1 C$  (rate of cement deposition by termites)  
 $- k_2 P$  (rate of pheromone loss to air)

$$\partial_t P = k_1 C - k_2 P$$

11/19/09

25

### Equation for $H$

(Concentration of Pheromone)

$\partial_t H$  (rate of change of concentration) =  
 $k_2 P$  (pheromone from deposited material)  
 $- k_4 H$  (pheromone decay)  
 $+ D_H \nabla^2 H$  (pheromone diffusion)

$$\partial_t H = k_2 P - k_4 H + D_H \nabla^2 H$$

11/19/09

26

### Equation for $C$

(Density of Laden Termites)

$\partial_t C$  (rate of change of concentration) =  
 $\Phi$  (flux of laden termites)  
 $- k_1 C$  (unloading of termites)  
 $+ D_C \nabla^2 C$  (random walk)  
 $- \gamma \nabla \cdot (CVH)$  (chemotaxis: response to pheromone gradient)

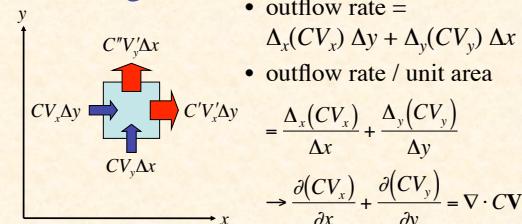

$$\partial_t C = \Phi - k_1 C + D_C \nabla^2 C - \gamma \nabla \cdot (CVH)$$

11/19/09

27

### Explanation of Divergence

Divergence

11/19/09

28

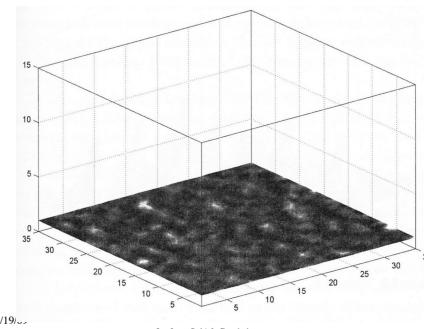

### Explanation of Chemotaxis Term

- The termite flow *into* a region is the *negative* divergence of the flux through it  
 $-\nabla \cdot \mathbf{J} = -(\partial J_x / \partial x + \partial J_y / \partial y)$
- The flux velocity is proportional to the pheromone gradient  
 $\mathbf{J} \propto \nabla H$
- The flux density is proportional to the number of moving termites  
 $\mathbf{J} \propto C$
- Hence,  $-\gamma \nabla \cdot \mathbf{J} = -\gamma \nabla \cdot (CVH)$

11/19/09

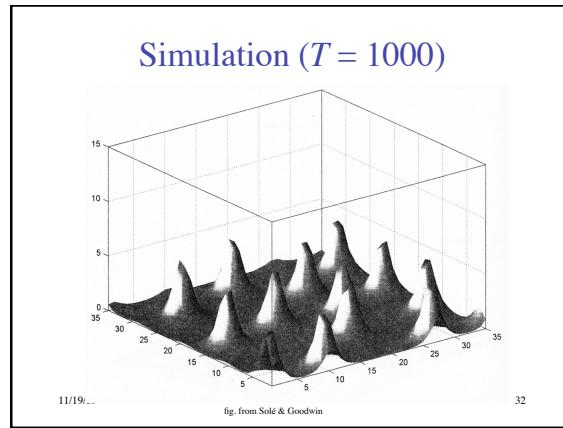

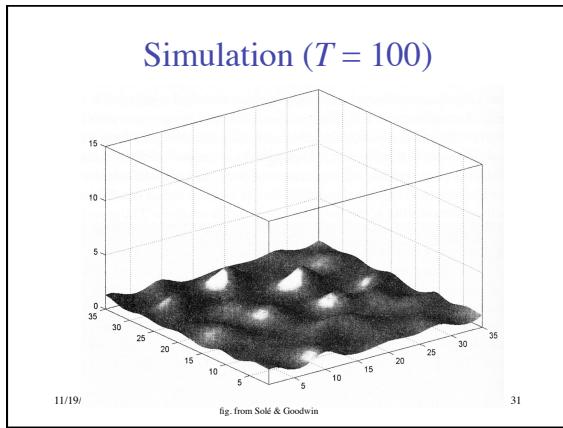

29

### Simulation ( $T = 0$ )

11/19/09

30

**Conditions for Self-Organized Pillars**

- Will not produce regularly spaced pillars if:
  - density of termites is too low
  - rate of deposition is too low
- A homogeneous stable state results

$$C_0 = \frac{\Phi}{k_1}, \quad H_0 = \frac{\Phi}{k_4}, \quad P_0 = \frac{\Phi}{k_2}$$

11/19/09  
33

**NetLogo Simulation of Deneubourg Model**

[Run Pillars3D.nlogo](#)

11/19/09  
34

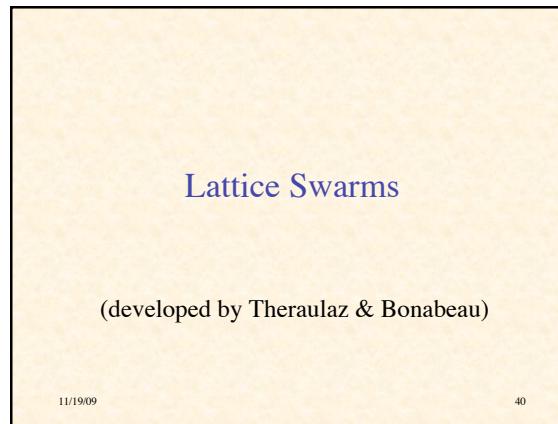

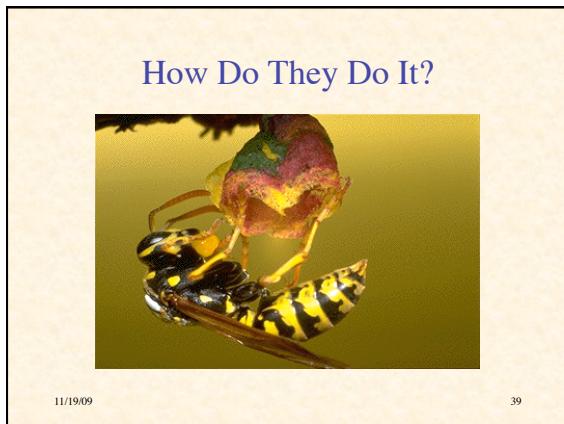

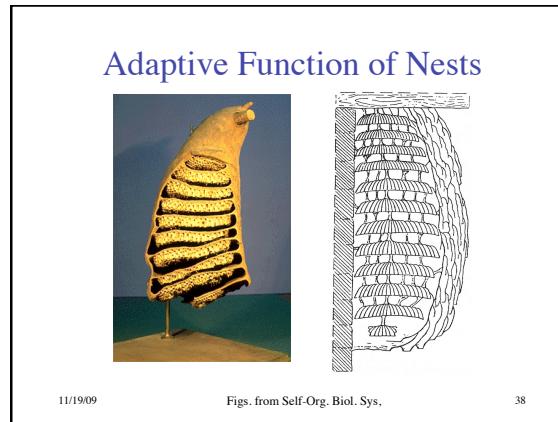

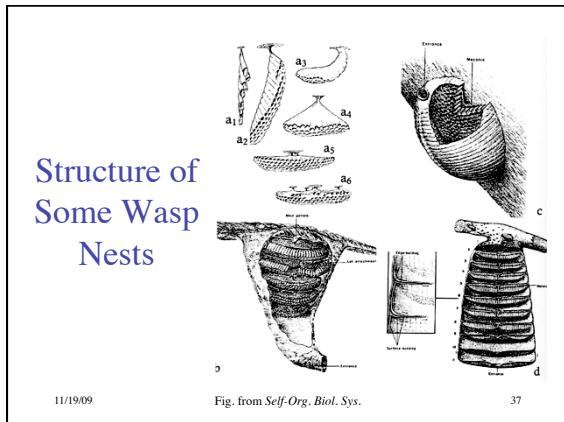

**Interaction of Three Pheromones**

- Queen pheromone governs size and shape of queen chamber (template)
- Cement pheromone governs construction and spacing of pillars & arches (stigmergy)
- Trail pheromone:
  - attracts workers to construction sites (stigmergy)
  - encourages soil pickup (stigmergy)
  - governs sizes of galleries (template)

11/19/09  
35

**Wasp Nest Building and Discrete Stigmergy**

11/19/09  
Fig. from Solé & Goodwin  
36

**Discrete vs. Continuous Stigmergy**

- Recall: *stigmergy* is the coordination of activities through the environment
- Continuous or quantitative stigmergy*
  - quantitatively different stimuli trigger quantitatively different behaviors
- Discrete or qualitative stigmergy*
  - stimuli are classified into distinct classes, which trigger distinct behaviors

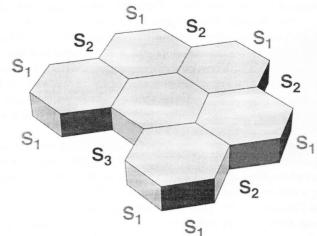

11/19/09      41

**Discrete Stigmergy in Comb Construction**

- Initially all sites are equivalent
- After addition of cell, qualitatively different sites created

11/19/09      Fig. from *Self-Org. Biol. Sys.*      42

### Numbers and Kinds of Building Sites

11/19/09

Fig. from *Self-Org. Biol. Sys.*

43

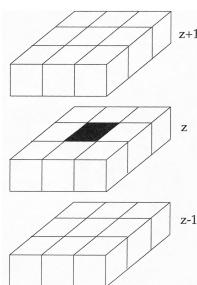

### Lattice Swarm Model

- Random movement by wasps in a 3D lattice
  - cubic or hexagonal
- Wasps obey a 3D CA-like rule set
- Depending on configuration, wasp deposits one of several types of “bricks”
- Once deposited, it cannot be removed
- May be deterministic or probabilistic
- Start with a single brick

11/19/09

44

### Cubic Neighborhood

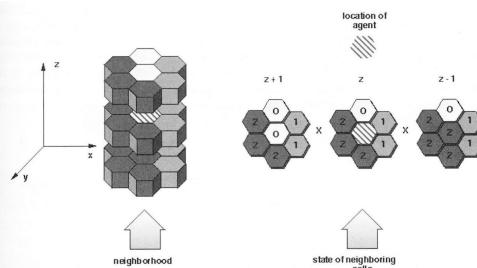

- Deposited brick depends on states of 26 surrounding cells
- Configuration of surrounding cells may be represented by matrices:

$$\begin{bmatrix} 0 & 0 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} \times \begin{bmatrix} 0 & 0 & 0 \\ 1 & \bullet & 0 \\ 0 & 0 & 0 \end{bmatrix} \times \begin{bmatrix} 0 & 0 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$$

11/19/09 Fig. from Solé &amp; Goodwin

45

### Hexagonal Neighborhood

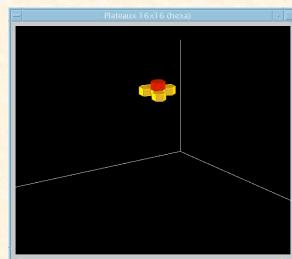

11/19/09

Fig. from Bonabeau, Dorigo &amp; Theraulaz

46

### Example Construction

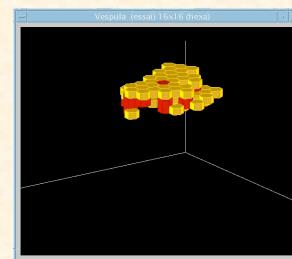

11/19/09

Fig. from IASC Dept., ENST de Bretagne.

47

### Another Example

11/19/09

fig. from IASC Dept., ENST de Bretagne.

48

### A Simple Pair of Rules

Rule 1      Rule 2

11/19/09      Fig. from *Self-Org. in Biol. Sys.*      49

### Result from Deterministic Rules

a      11/19/09      Fig. from *Self-Org. in Biol. Sys.*      50

### Result from Probabilistic Rules

b      11/19/09      Fig. from *Self-Org. in Biol. Sys.*      51

### Example Rules for a More Complex Architecture

The following stimulus configurations cause the agent to deposit a type-1 brick:

$$(1.1) \begin{bmatrix} 0 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 0 \end{bmatrix} \times \begin{bmatrix} 0 & 0 & 0 \\ 0 & \bullet & 0 \\ 0 & 0 & 0 \end{bmatrix} \times \begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$$

$$(1.2) \begin{bmatrix} 0 & 0 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} \times \begin{bmatrix} 0 & 0 & 0 \\ 1 & \bullet & 0 \\ 0 & 0 & 0 \end{bmatrix} \times \begin{bmatrix} 0 & 0 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$$

11/19/09      52

### B

(2.1)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$	(2.10)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 1 & 0 \end{bmatrix}$
(2.2)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 2 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$	(2.11)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 2 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$
(2.3)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$	(2.12)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 0 & 2 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 2 \end{bmatrix}$
(2.4)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 2 & 0 \end{bmatrix}$	(2.13)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 2 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$
(2.5)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$	(2.14)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 2 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$
(2.6)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 2 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$	(2.15)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 0 & 2 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$
(2.7)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 2 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$	(2.16)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 0 & 2 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$
(2.8)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$	(2.17)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 0 & 2 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$
(2.9)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$	$\begin{bmatrix} 1 & 2 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$	(2.18)	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 2 & 0 \end{bmatrix}$	$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$

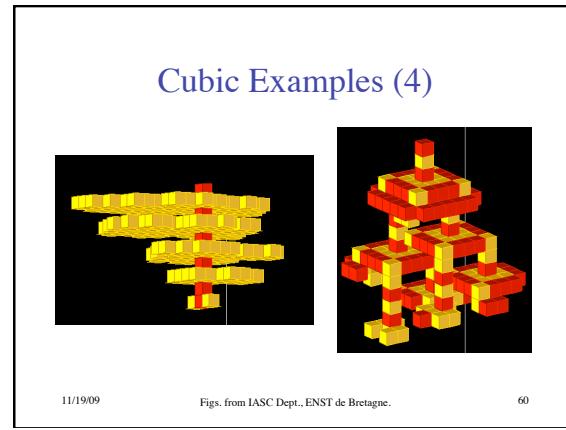

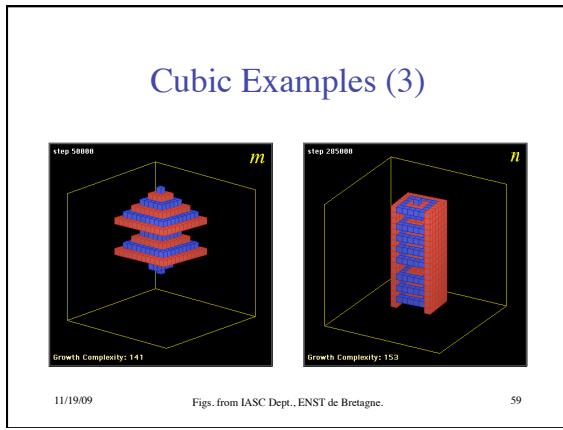

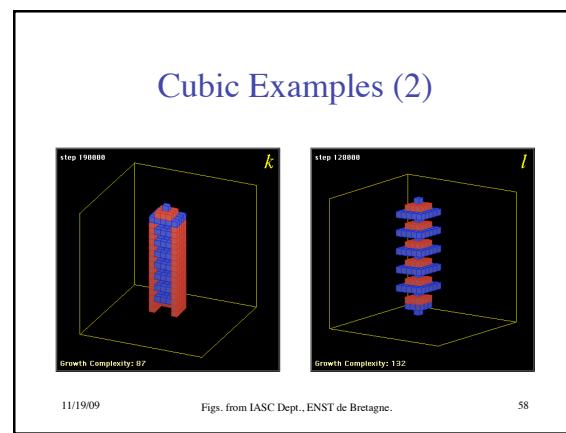

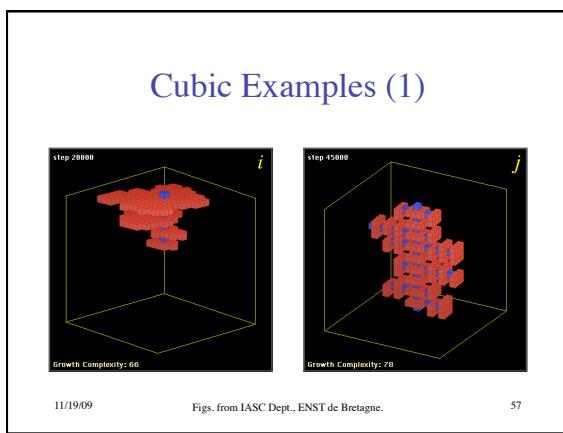

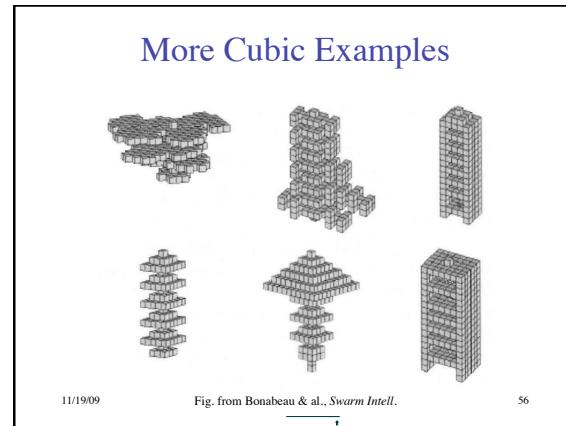

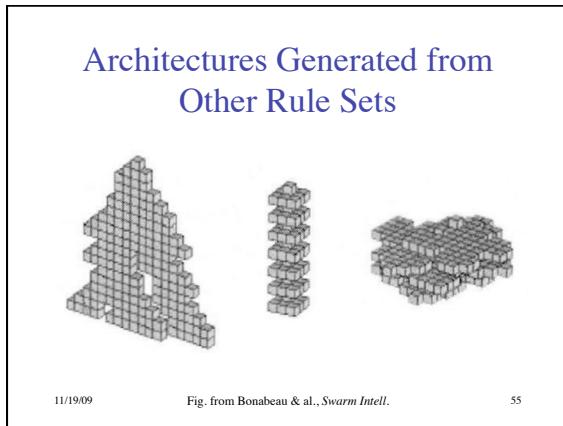

For these configurations, deposit a type-2 brick

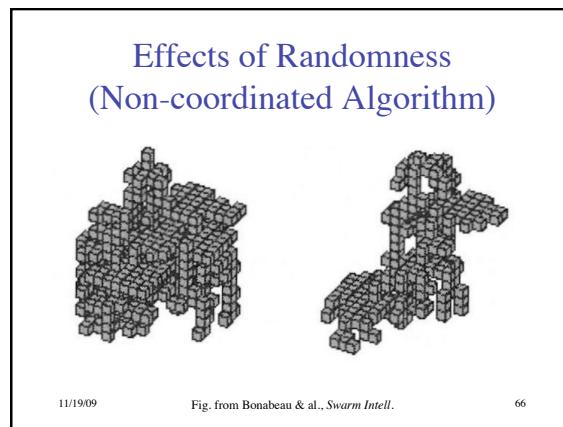

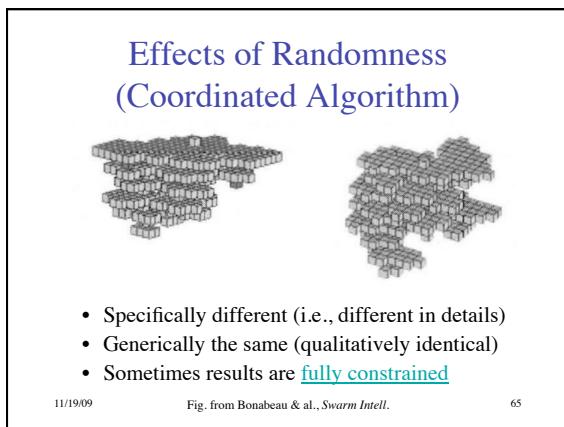

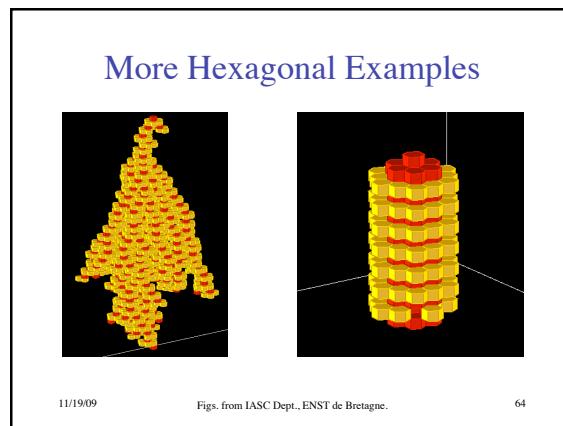

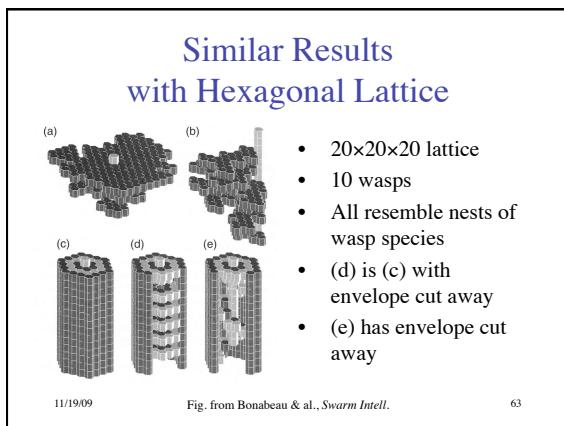

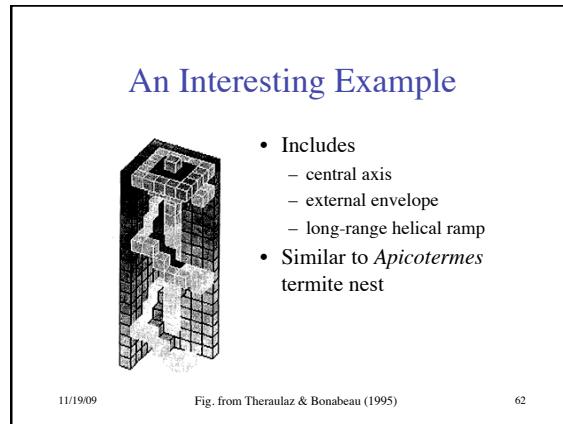

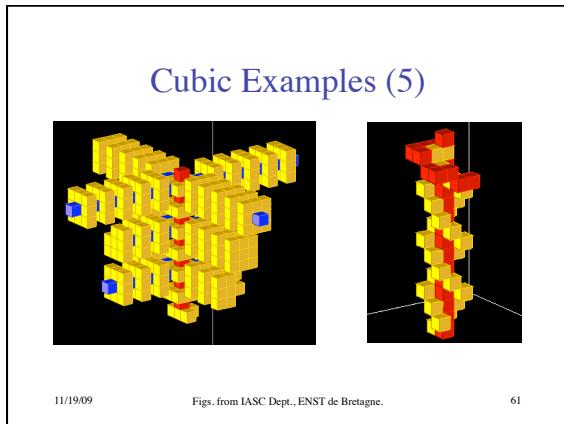

11/19/09      53

### Result

- 20x20x20 lattice
- 10 wasps
- After 20 000 simulation steps
- Axis and plateaus
- Resembles nest of *Parachartergus*

11/19/09      Fig. from Bonabeau & al., *Swarm Intell.*      54

## Non-coordinated Algorithms

- Stimulating configurations are not ordered in time and space
- Many of them overlap
- Architecture grows without any coherence
- May be convergent, but are still unstructured

11/19/09

67

## Coordinated Algorithm

- Non-conflicting rules
  - can't prescribe two different actions for the same configuration
- Stimulating configurations for different building stages cannot overlap
- At each stage, “handshakes” and “interlocks” are required to prevent conflicts in parallel assembly

11/19/09

68

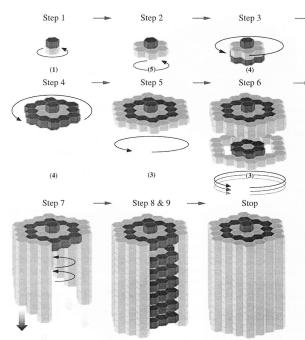

## More Formally...

- Let  $C = \{c_1, c_2, \dots, c_n\}$  be the set of local stimulating configurations
- Let  $(S_1, S_2, \dots, S_m)$  be a sequence of assembly stages
- These stages partition  $C$  into mutually disjoint subsets  $C(S_p)$
- Completion of  $S_p$  signaled by appearance of a configuration in  $C(S_{p+1})$

11/19/09

69

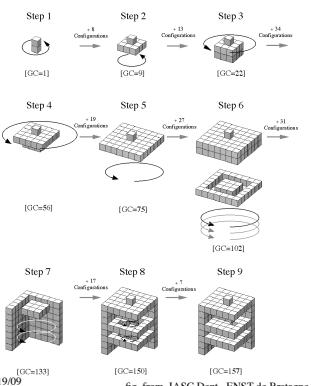

## Example

11/19/09

Fig. from Camazine & al., *Self-Org. Biol. Sys.*

70

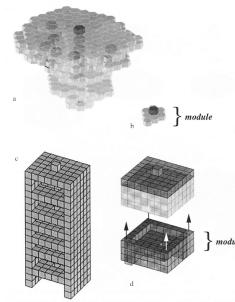

11/19/09

fig. from IASC Dept., ENSI de Bretagne.

71

## Modular Structure

11/19/09

Fig. from Camazine & al., *Self-Org. Biol. Sys.*

72

## Possible Termination Mechanisms

- Qualitative
  - the assembly process leads to a configuration that is not stimulating
- Quantitative
  - a separate rule inhibiting building when nest a certain size relative to population
  - “empty cells rule”: make new cells only when no empties available
  - growing nest may inhibit positive feedback mechanisms

11/19/09

73

## Observations

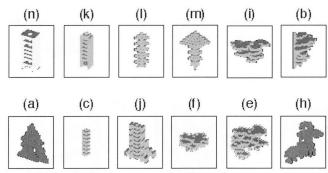

- Random algorithms tend to lead to uninteresting structures
  - random or space-filling shapes
- Similar structured architectures tend to be generated by similar coordinated algorithms
- Algorithms that generate structured architectures seem to be confined to a small region of rule-space

11/19/09

74

## Analysis

- Define matrix M:
  - 12 columns for 12 sample structured architectures
  - 211 rows for stimulating configurations
  - $M_{ij} = 1$  if architecture  $j$  requires configuration  $i$

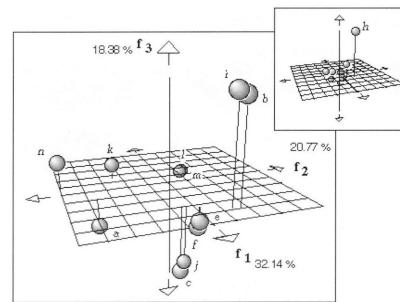

11/19/09

Fig. from Bonabeau & al., *Swarm Intell.*

75

## Factorial Correspondence Analysis

11/19/09

Fig. from Bonabeau & al., *Swarm Intell.*

76

## Conclusions

- Simple rules that exploit discrete (qualitative) stigmergy can be used by autonomous agents to assemble complex, 3D structures
- The rules must be non-conflicting and coordinated according to stage of assembly
- The rules corresponding to interesting structures occupy a comparatively small region in rule-space

11/19/09

Part 6B

77
