

SRC: Diode Rectifier

Averaging Step:

$$(n=1) \quad \langle i_{out} \rangle = \frac{1}{T_s} \langle g \rangle = \frac{1}{T_s} C 2V_{c1}$$

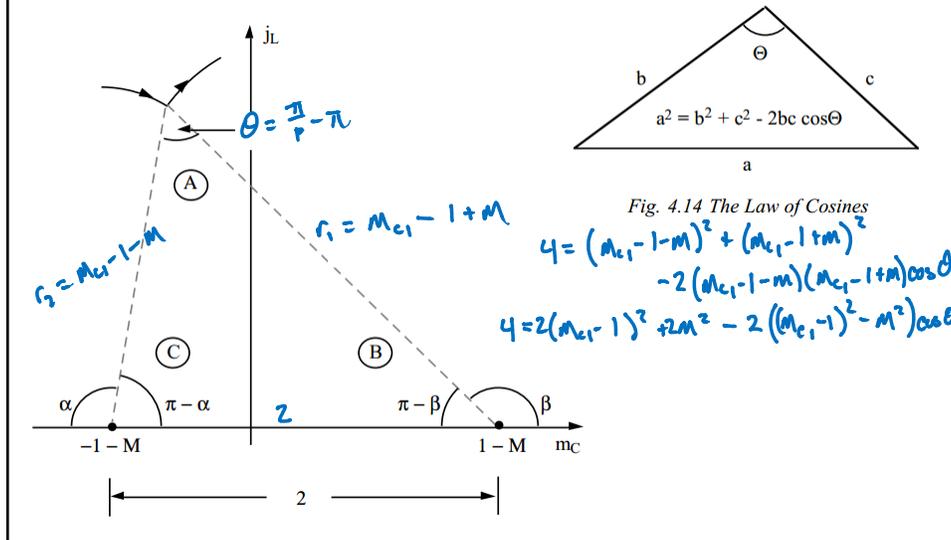

$$J = 2M_{c1} \frac{IF}{\pi} = \boxed{2M_{c1} \frac{F}{\pi} = J}$$

$$t_d + t_r = \frac{T_s}{2} \rightarrow \boxed{\alpha + \beta = \frac{\pi}{F}}$$

$$M_{c1} = J \frac{\pi}{2F}$$

State Plane Solution

$$4 = 2(M_{c1} - 1)^2 \left(1 - \cos\left(\frac{\pi}{F} - \pi\right)\right) + 2M^2 \left(1 + \cos\left(\frac{\pi}{F} - \pi\right)\right)$$

$$\rightarrow \cos\left(\frac{\pi}{F} - \pi\right) = -\cos\left(\frac{\pi}{F}\right)$$

$$\rightarrow M_{c1} = \frac{1}{2} \frac{\pi}{F}$$

$$1 = \frac{1}{2} \left(\frac{1}{2} \frac{\pi}{F} - 1\right)^2 \left(1 + \cos\left(\frac{\pi}{F}\right)\right) + \frac{1}{2} M^2 \left(1 - \cos\left(\frac{\pi}{F}\right)\right)$$

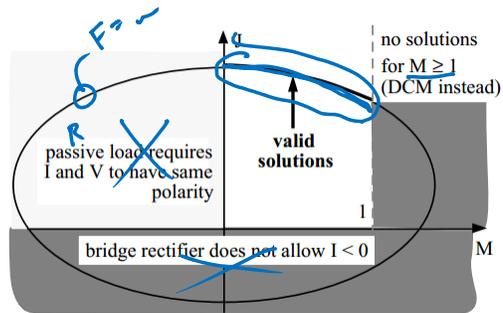

$$\frac{1 + \cos\left(\frac{\pi}{F}\right)}{2} = \cos^2\left(\frac{\pi}{2F}\right)$$

$$\frac{1 - \cos\left(\frac{\pi}{F}\right)}{2} = \sin^2\left(\frac{\pi}{2F}\right)$$

$$1 = \left(\frac{1}{2} \frac{\pi}{F} - 1\right)^2 \cos^2\left(\frac{\pi}{2F}\right) + M^2 \sin^2\left(\frac{\pi}{2F}\right)$$
