Fall Semester 2005

## HW \# 2

wlg Due: Sept 20
Name $\qquad$
Print (last, first)
Use engineering paper. Work only on one side of the paper. Use this sheet as your cover sheet, placed on top of your work and stapled in the top left-hand corner. Number the problems at the top of the page, in the center of the sheet. Do neat work. Underline your answers. Show how you got your equations. Be sure to show how you got your answers. Each problem counts 10 points.
(1) Find $I_{0}$ by using nodal analysis. Ans $I_{0}=0.6 \mathrm{~mA}$

(2) Determine the node voltage equations for $\mathrm{V}_{1}, \mathrm{~V}_{2}$, and $\mathrm{V}_{3}$ for the following circuit. Use MATLAB to solve for these voltages. Ans $\mathrm{V}_{1}=-6 \mathrm{~V}, \mathrm{~V}_{2}=-12 \mathrm{~V}, \mathrm{~V}_{3}=-12 \mathrm{~V}$

(3) Use nodal analysis to solve for $\mathrm{V}_{\mathrm{o}}$ and $\mathrm{I}_{\mathrm{x}} . \mathrm{V}_{\mathrm{o}}=2 \mathrm{~V}, \mathrm{I}_{\mathrm{x}}=12 \mathrm{~mA}$

(4) Use nodal analysis to solve for $V_{o}$ and $I_{x}$ in the following circuit. $V_{o}=9 \mathrm{~V}, \mathrm{I}_{\mathrm{x}}=3 \mathrm{~mA}$

(5) Work problem 3.15 in the text. Ans v = 8.89 V
(6) Work problem 3.19 from the text. Ans $\mathrm{I}=-0.163 \mathrm{I}$, A
(7) You are given the following circuit. Use mesh analysis to find $\mathrm{I}_{1}, \mathrm{I}_{2}$ and $\mathrm{I}_{3}$. Write out the equations and then place them in matrix form. $\mathrm{I}_{1}=1.28 \mathrm{~A}, \mathrm{I}_{2}=0.976 \mathrm{~A}, \mathrm{I}_{3}=-2.60 \mathrm{~A}$

(8) You are given the circuit shown below. Ans: $I_{0}=12 / 13 \mathrm{~A}$
(a) Use source transformation to determine the current $\mathrm{I}_{0}$.
(b) Use superposition to determine $\mathrm{I}_{0}$.
(c) Find the Thevenin equivalent circuit to the left of terminals a-b and then find $\mathrm{I}_{0}$.

(9) Find the Thevenin equivalent circuit for the network to the left of terminals "a" and "b". Give your values for $\mathrm{V}_{\mathrm{TH}}$ and $\mathrm{R}_{\mathrm{TH}}$. Use the Thevenin circuit to find $\mathrm{V}_{0}$. Ans: $\mathrm{R}_{\mathrm{TH}}=5 \Omega, \mathrm{~V}_{\mathrm{TH}}=19.2 \mathrm{~V}$, $\mathrm{V}_{\mathrm{o}}=12.8 \mathrm{~V}$.

(10) Replace the $10 \Omega$ resistor of Problem (9) with $R_{x}$. Find $R_{x}$ for maximum power transfer. Give the value of the power delivered to $\mathrm{R}_{\mathrm{x}}$. Ans: $\mathrm{P}_{\mathrm{Rx}}=18.43 \mathrm{~W}$
(Extra) This problem is not required. Work for extra credit (10 points).
Find the Norton equivalent circuit for the following network. In doing this problem, find the open circuit voltage at terminals a-b. This is called $V_{o c}$. It is also $V_{T H}$. Then find $\mathrm{I}_{\mathrm{sc}}$, which is I short circuit. This is the current that flows from a to b when a short is placed between a and b . $\mathrm{R}_{\mathrm{TH}}=\mathrm{V}_{\mathrm{oc}} / \mathrm{I}_{\mathrm{sc}}$, The Norton current source is the $\mathrm{I}_{\mathrm{sc}}$ that you obtained. Ans: $\mathrm{R}_{\mathrm{TH}}=-4 \Omega, \mathrm{I}_{\mathrm{N}}=3 \mathrm{~A}$.

On this problem, do not find $\mathrm{R}_{\mathrm{TH}}$ by applying a source at a-b and calculating $\mathrm{R}_{\mathrm{TH}}=\mathrm{V}_{\mathrm{s}} / 1$, where 1 represents a 1 amp source applied at a-b. You may do the problem like this for fun if you wish. But $I$ want you to find $R_{T H}$ from $V_{o c} / I_{s c}$.
