

# An Introduction to the Problem of Oscillation Source Location

“Frankie” Qiang Zhang

# Phasor

Time Domain  $\rightarrow$  Frequency Domain

- A vector that describes sinusoidal signals
  - voltage or current
- Fully characterized by
  - Frequency
  - Magnitude
  - Phase Angle

**Phasor Representation**

# Synchrophasor

- Why **Synchro**-phasor?
  - Angles need a synchronized common reference.

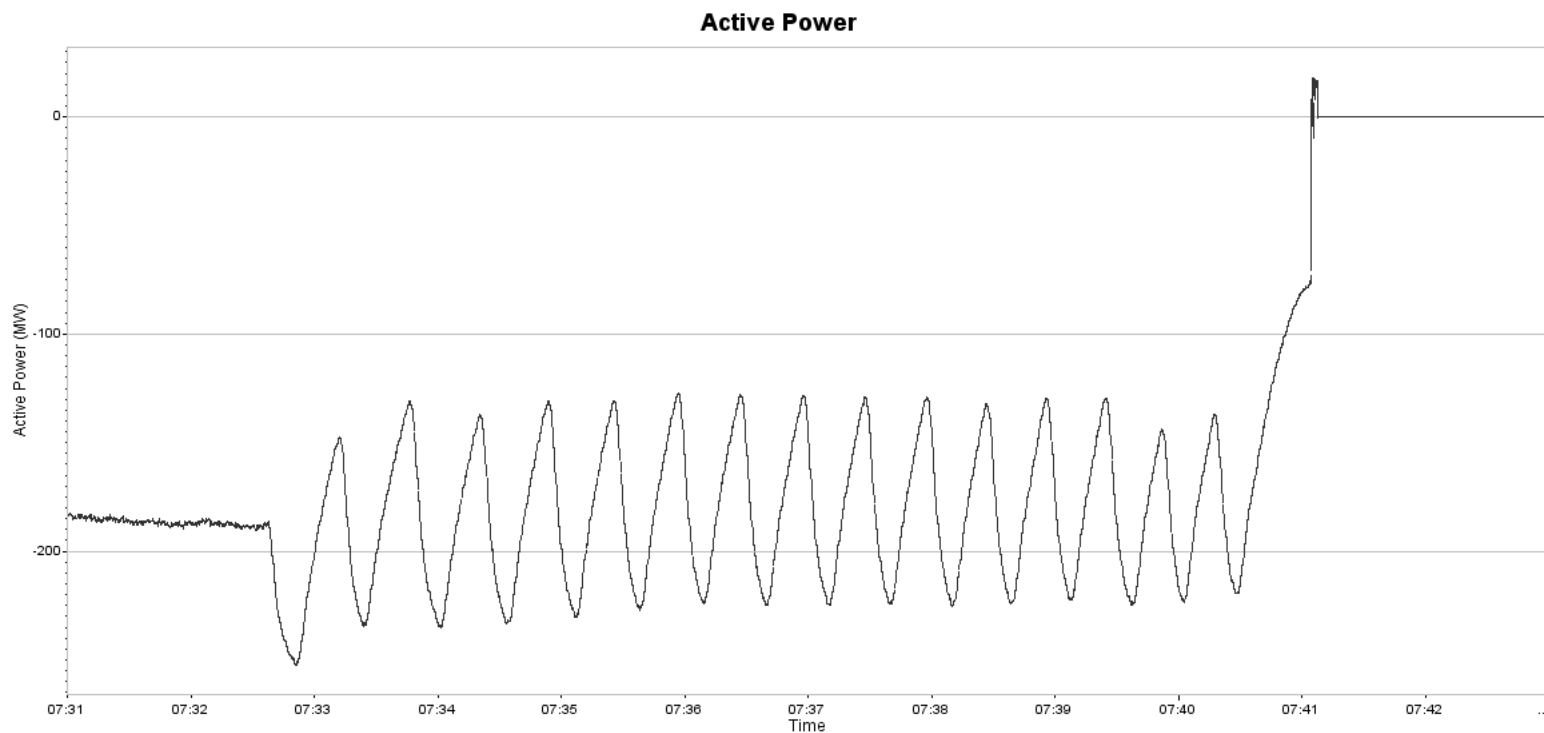

Synchrophasor = Phasor + GPS + high sampling rate

- PMU - Phasor Measurement Unit

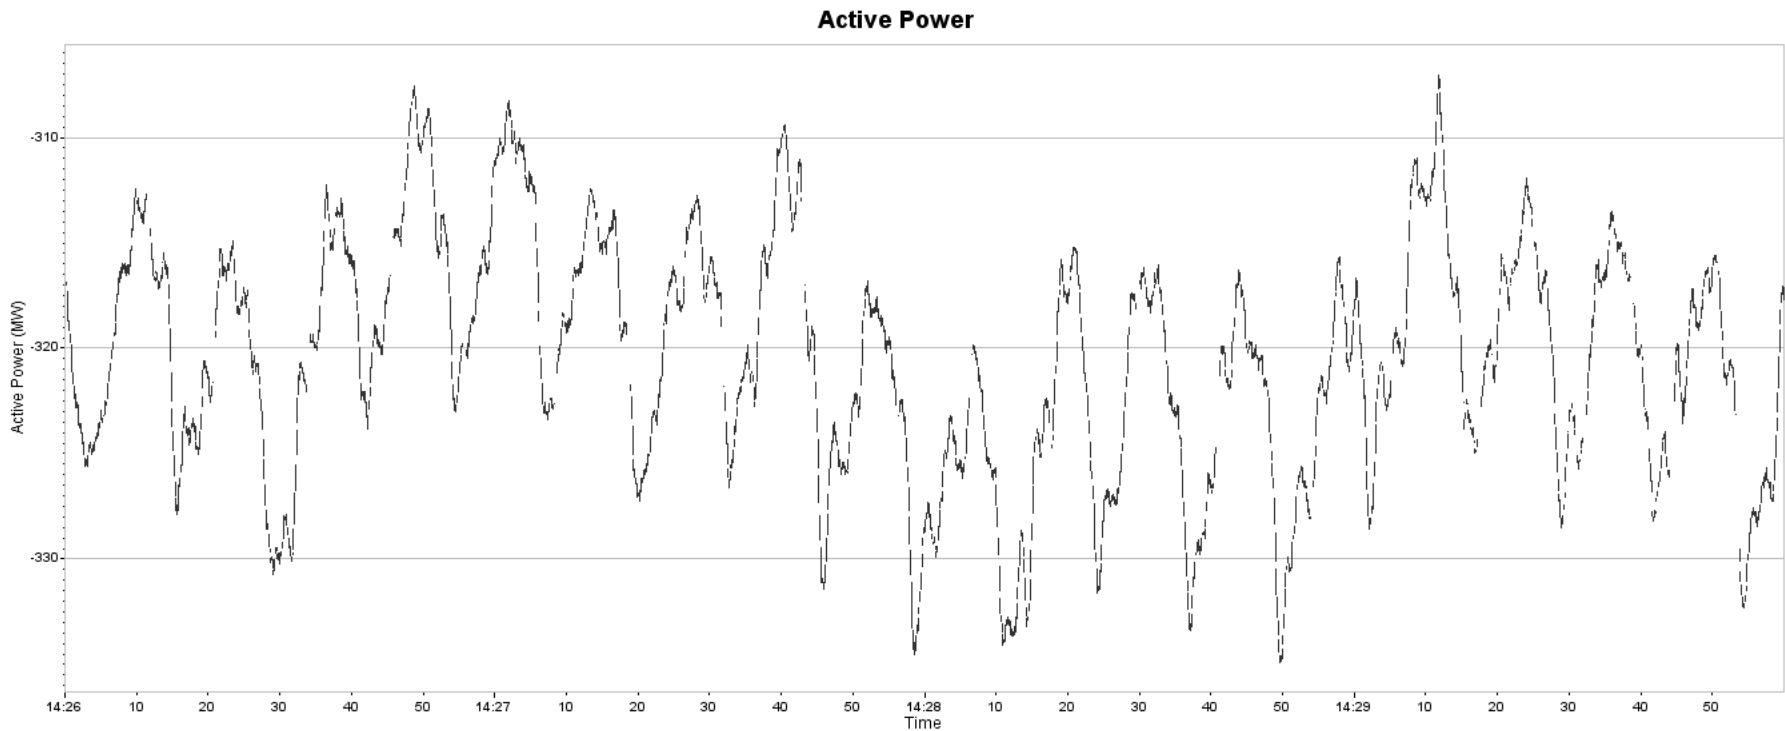

# Phenomenon – 1

- 0.03 Hz oscillation before unit tripping

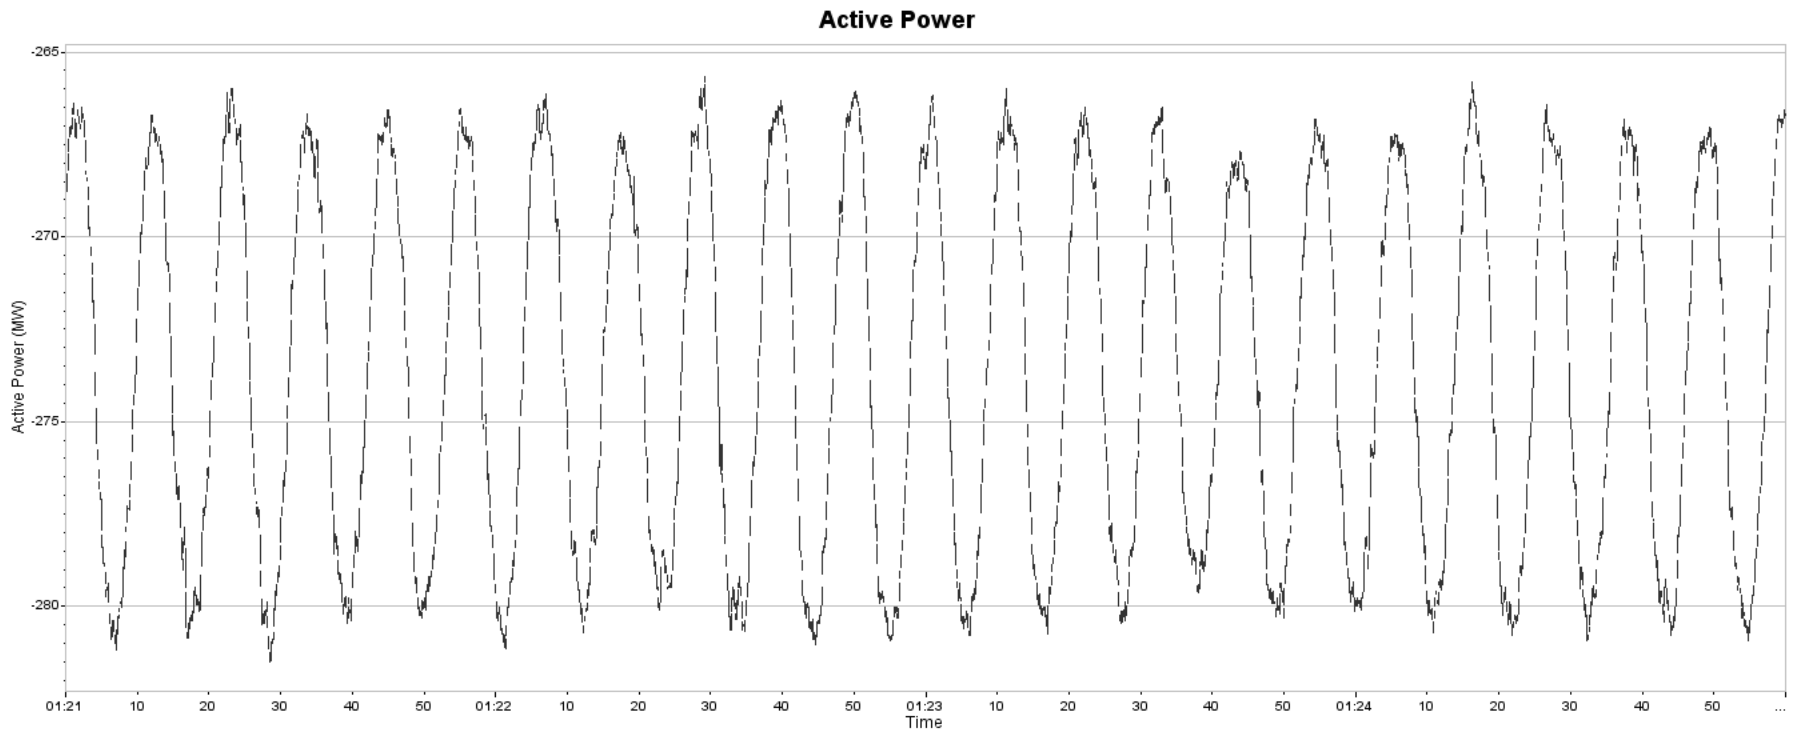

# Phenomenon – 2

- 0.07 Hz sustained oscillation

# Phenomenon – 3

- 0.09 Hz sustained oscillation

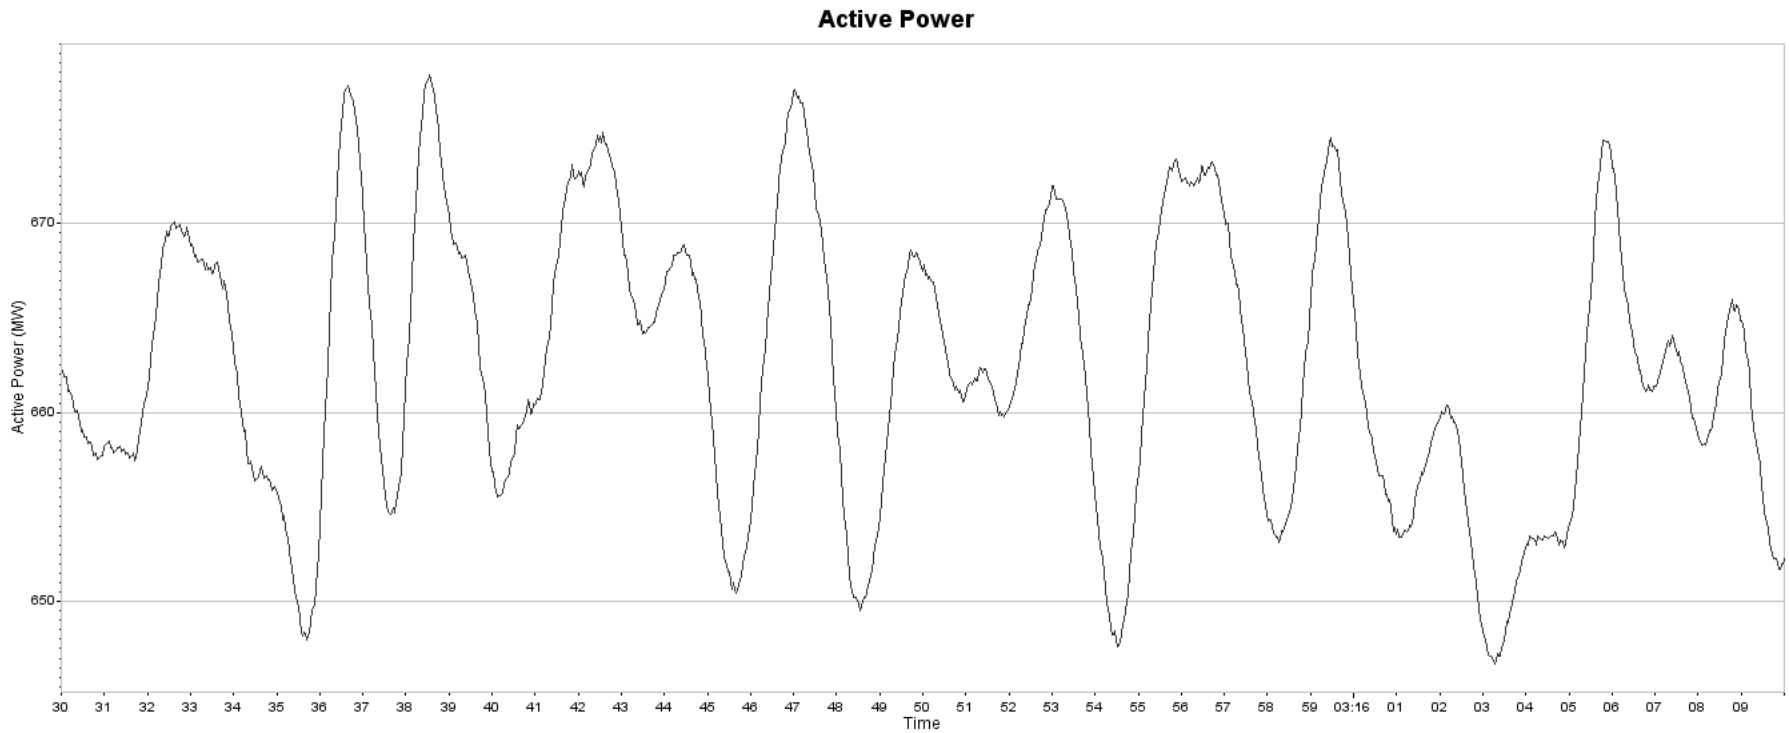

# Phenomenon – 4

- 0.12 Hz oscillation

# Phenomenon – 5

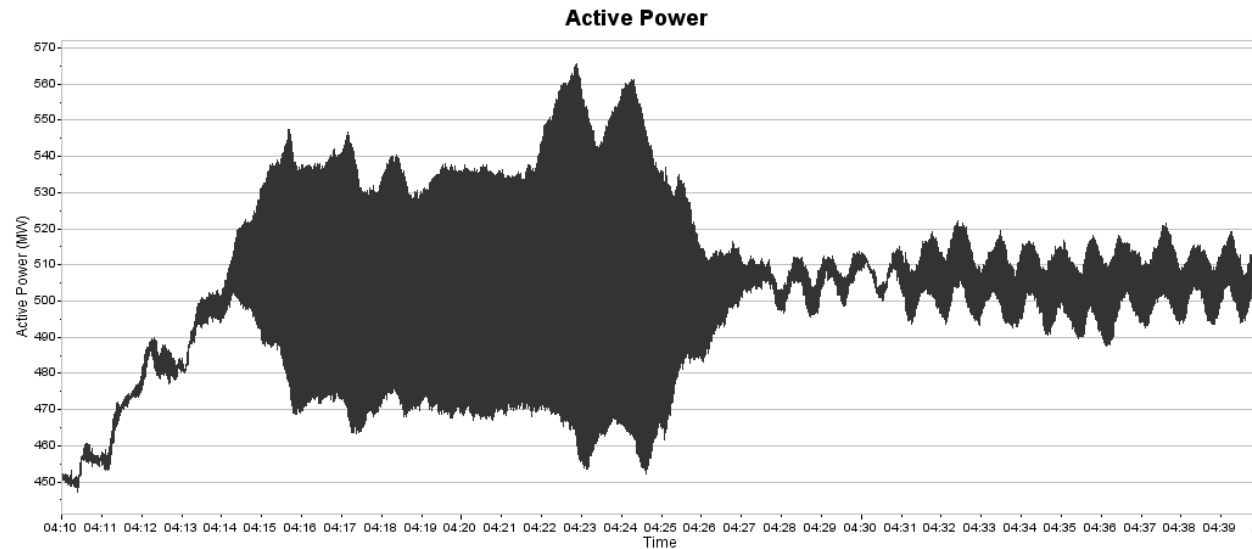

- 0.3 Hz inter-area oscillation

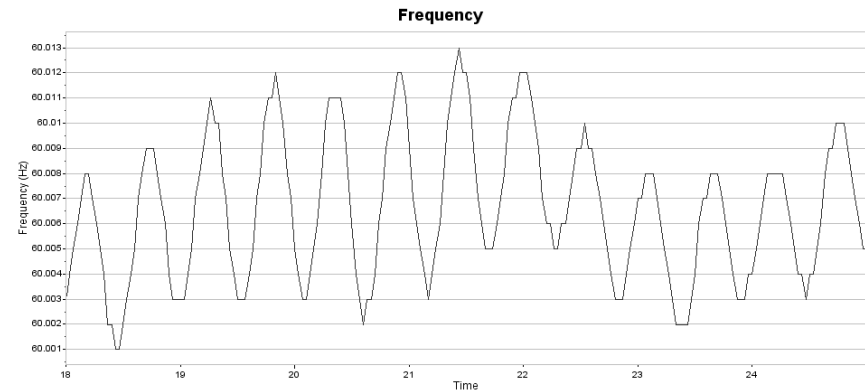

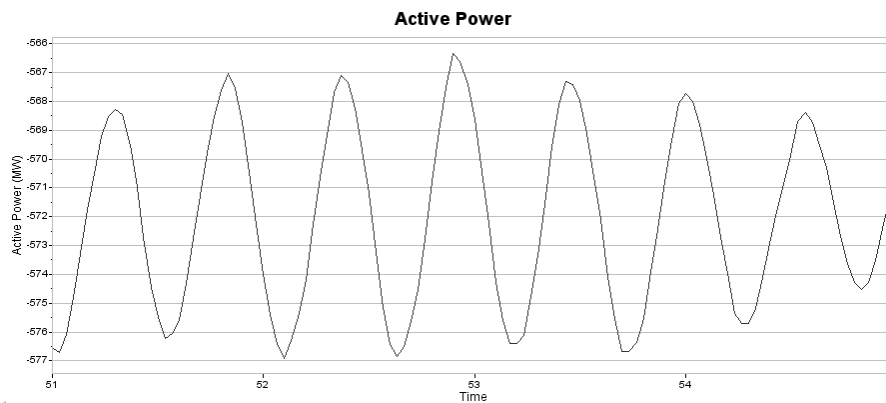

# Phenomenon – 6

- 1 Hz sustained oscillation

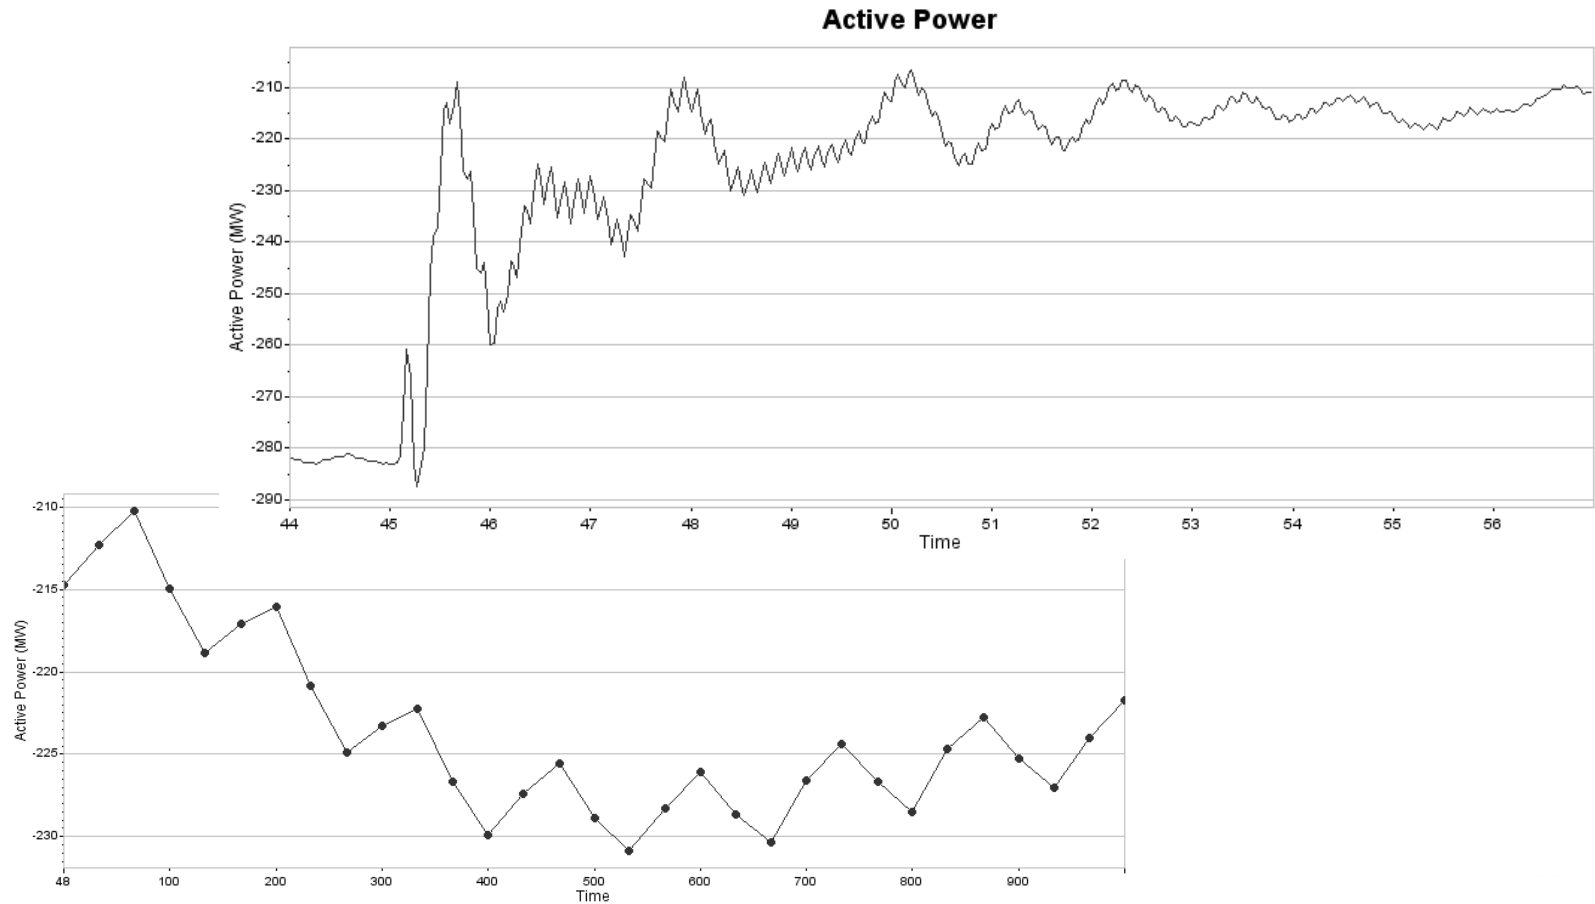

# Phenomenon – 7

- 1.8 Hz sustained oscillation

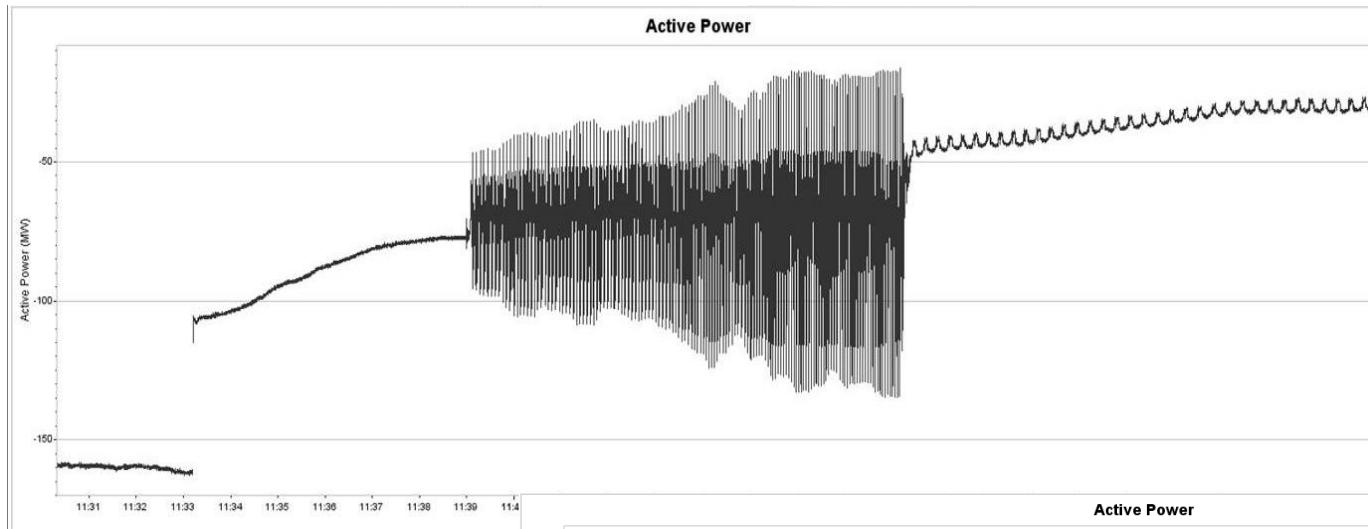

# Phenomenon – 8

- 8 Hz (& 1 Hz) oscillation after a disturbance

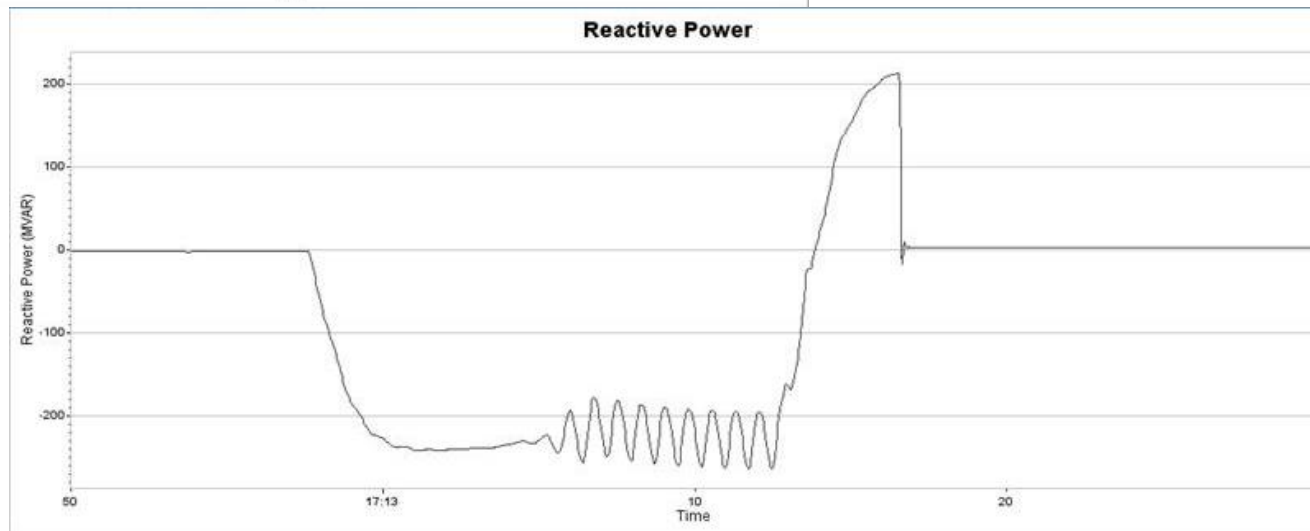

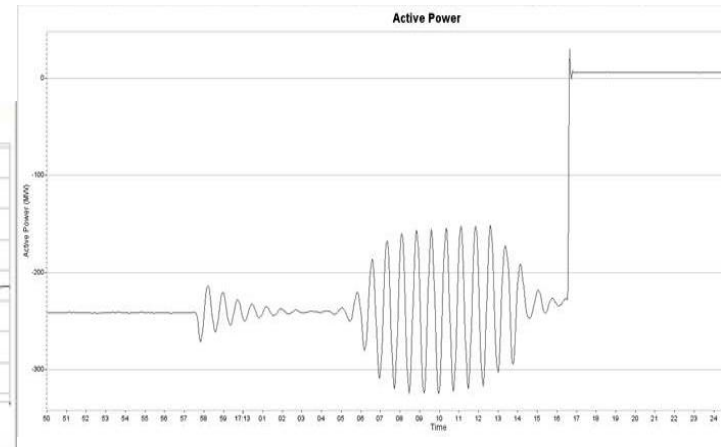

# Phenomenon – 9

- Combined Cycle – 2x1  $\rightarrow$  1x1, with harmonics

# Phenomenon – 10

- Loss of excitation

# Problems

- “New”, “unknown” oscillations seen in PMU data
  - Most of them are forced oscillations
- Present a risk to the grid operations security
- Not seen in the model based study
- Need new study approaches
- Need to identify and mitigate in real-time
  - Actionable information
  - **Possibly the first killer app for PMU data**

# Features Comparison

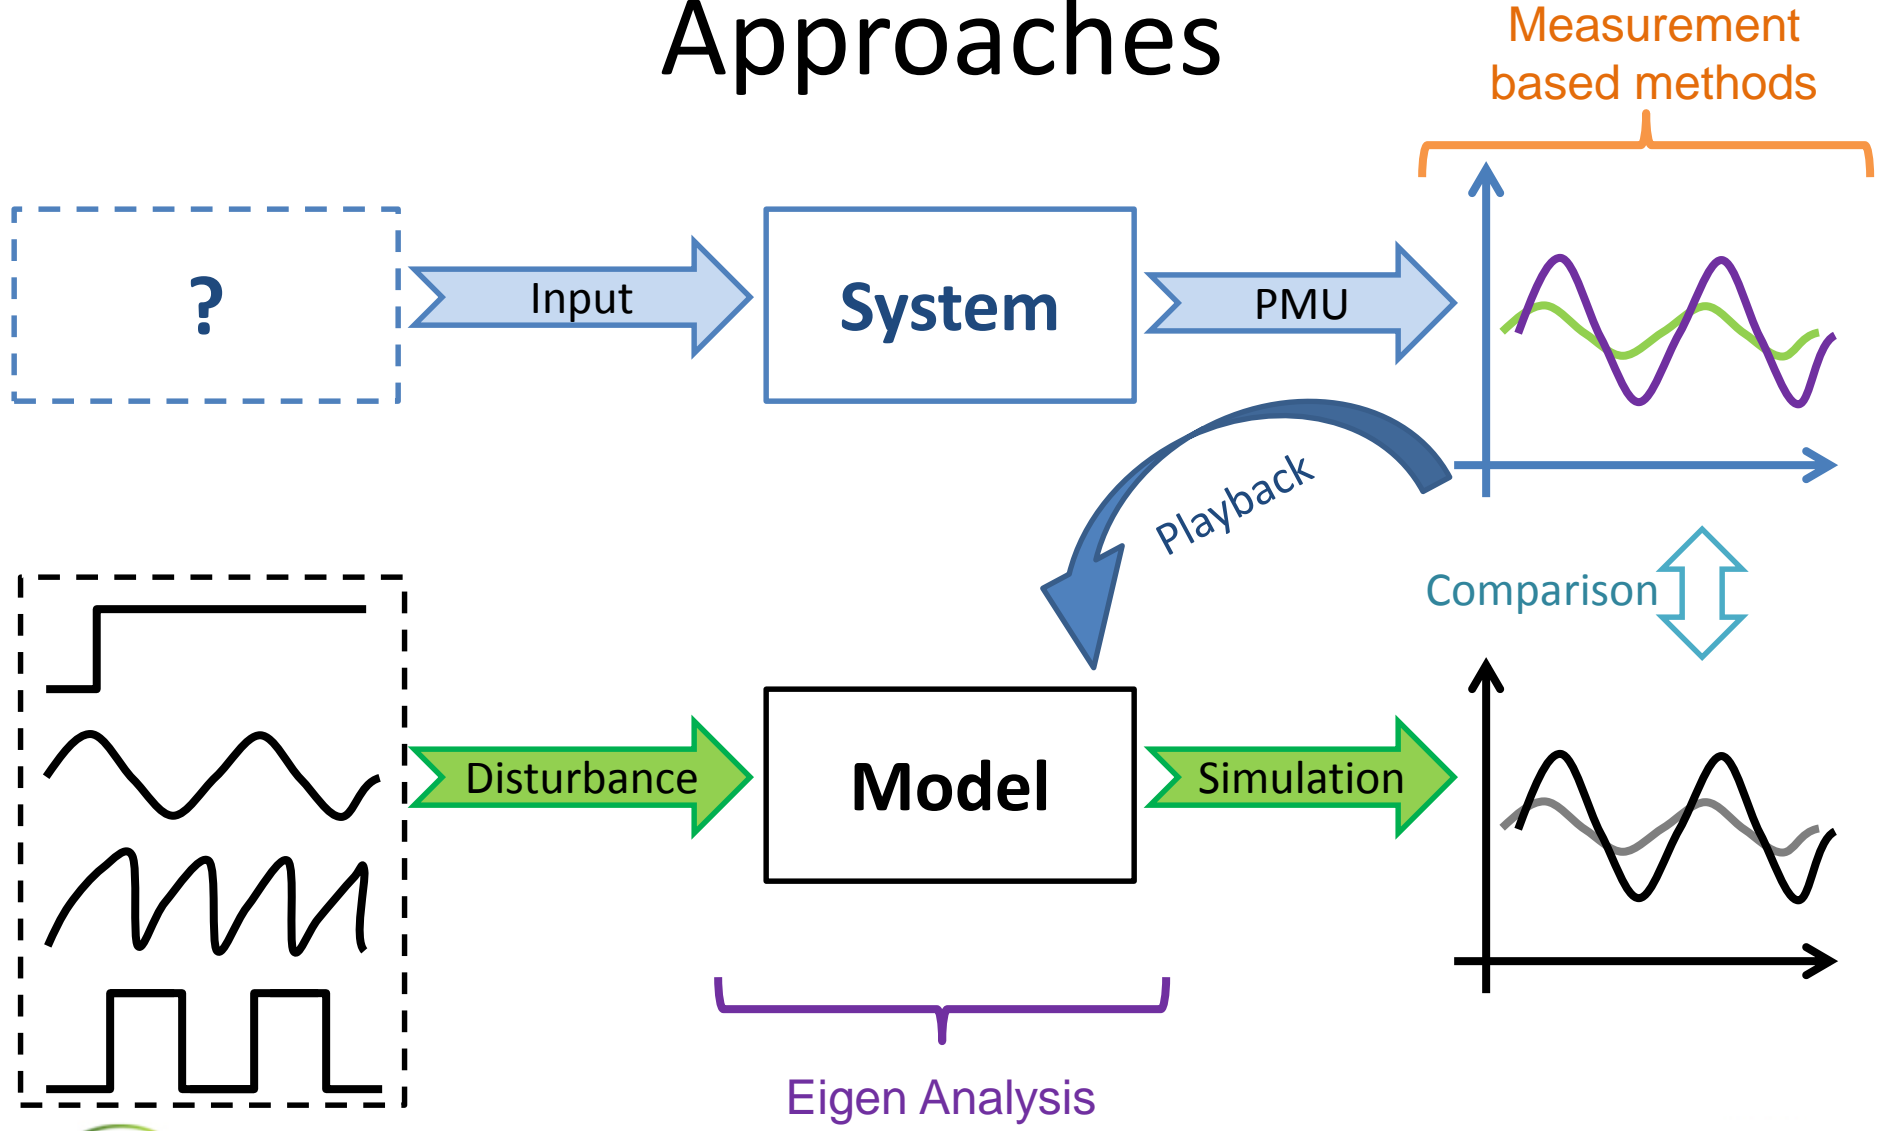

## Natural Oscillations

- Specific frequencies
  - Normally no harmonics
- In the state matrix
  - No input needed
  - Excited by disturbances
- Steady State
  - Small signal stability
- Mature model based study

## Forced Oscillations

- May have harmonics
  - Integral multiples of  $F_0$
  - Source may not be sinusoidal
- Periodic input
  - Sustained input needed
  - Could resonate with natural modes
- Not steady state
  - Bounded Input Bounded Output (BIBO) stability
- Hard to replicate in model

# Approaches

The logo for ISO New England features a stylized map of the New England region composed of orange dots. To the left of the map, the letters "ISO" are written in a bold, blue, sans-serif font. To the right of the map, the words "new england" are written in a blue, sans-serif font, with "new" in lowercase and "england" in lowercase.
