

5 Tetrahedron Module #1 (cont)

Fold the upper right corner down again (top layer only), and then fold line CD (again, top layer only) to line CE (bisecting the 45-degree angle DCE)

Mountain fold the entire module along line CF. Unfold back to step 13 and trim with scissors along the thick lines. You can do this without scissors by folding the excess into the interior of the module, but this is too complex for me to diagram. You can figure it out yourself.

The finished module:
